Ra'anana, Israel Open to hybrid and remote

Product designer with a background in industrial design, focused on creating simple, intuitive and accessible digital experiences through user research. At Better Health, I design end-to-end VR onboarding experiences for adults 65+, across web, mobile and in-headset interfaces, from user interviews and user flows to prototyping, design system work and developer handoff. I use AI tools such as Claude Code to prototype and build.

Experience

UX/UI & Product Designer, Better Health Technologies

AUG 2024 - PRESENT Remote, US digital health company delivering VR-based care at home

At-Home VR Onboarding

Own the end-to-end, accessibility-focused onboarding journey for adults 65+ receiving a VR headset at home, many using VR for the first time: pre-arrival guide, printed Quick Start materials, fallback flows and in-headset onboarding.

Conducted user interviews to identify onboarding friction and turned findings into journey maps, user flows and Figma prototypes.

Designed and shipped a pre-arrival Wi-Fi preparation guide for mobile and desktop, now live in production, and designed the printed Quick Start guide.

Mapped about 53 headset states and onboarding paths to define in-headset flows and the transition into the VR session library (now in development).

Work with product, engineering and operations, and across PsyTechVR/Sitex content, Meta Quest hardware and ManageXR device management, through implementation and iteration.

Website, UX Research and Design System

Conducted UX research and user interviews to define problems in the website journey, then designed and shipped new pages.

Maintain and extend the website's Figma design system, originally created by an external studio, adding and updating components and styles.

Studio Designer & Production Lead, Monc Studio

APR 2024 - OCT 2024 Ceramics design studio

Ran the full production cycle for the studio's ceramic products, from mold-making and casting to glazing, firing and packaging, as right hand to the lead designer.

Product Design Intern, Tikkun Olam Makers (TOM)

JUL 2022 - SEP 2022 Assistive technology

Co-designed a portable, adjustable toilet seat support for a user with a specific need, working from in-depth interviews and usability testing with the user.

The design was further developed by TOM's R&D team and published as an open-source assistive technology product.

Selected Projects

Portfolio Website, Personal project

2026 Designed in Figma, built with Claude Code

Designed the site in Figma and built it with AI-assisted development in Claude Code, versioned and published through GitHub Pages. It includes an interactive Q&A hero and live embedded case studies.

Nest in City, Independent Final Project at Bezalel

2022 - 2023 Modular nesting habitats for wild bees, designed to be built by communities

Research-driven project: field experiments in avocado orchards with wild bee researcher Sharon Assis, iterative material development and a parametric, modular brick system supporting multiple nesting types.

Designed a guided build-it-yourself kit and a concept website, and ran a hands-on workshop with children in a Jerusalem community garden.

Education

B.Des, Industrial Design
Bezalel Academy of Arts and Design, Jerusalem
2023

Advanced Figma Course
Noble Desktop, New York

Skills

Design
Product design, UX/UI, User flows, Journey mapping, Prototyping, Design systems, Accessibility, Onboarding, Interfaces for web, mobile and VR

Research
User interviews, Usability testing, Field research

Tools
Figma, Claude Code (AI-assisted prototyping), HTML/CSS, GitHub, Adobe Illustrator and Photoshop

Also
Physical product design, SolidWorks, KeyShot, Shopify

Recognition

Nest in City
Finalist, Global Design Graduate Show 2023 (ARTS THREAD and Gucci, 5,000+ entrants)

Exhibited at Tallinn Design Festival

Featured in Designboom and MaterialDistrict

Languages

Hebrew (native), English
